1 SoftFLASH: analyzing the performance of clustered distributed virtual shared
memory   ■
Andrew Erlichson, Neal Nuckolls, Greg Chesson, John Hennessy
September 1996 **ACM SIGPLAN Notices , ACM SIGOPS Operating Systems Review ,
Proceedings of the seventh international conference on Architectural
support for programming languages and operating systems ASPLOS-
VII**, Volume 31 , 30 Issue 9 , 5
Publisher: ACM Press

Full text available: 📄 pdf(1.29 MB)   Additional Information: full citation, abstract, references, citings, index terms

One potentially attractive way to build large-scale shared-memory machines is to use
small-scale to medium-scale shared-memory machines as clusters that are interconnected
with an off-the-shelf network. To create a shared-memory programming environment
across the clusters, it is possible to use a virtual shared-memory software layer. Because
of the low latency and high bandwidth of the interconnect available within each cluster,
there are clear advantages in making the clusters as large as possi ...

2 Multi-core design II: Hardware support for spin management in overcommitted virtual ■
machines
Philip M. Wells, Koushik Chakraborty, Gurindar S. Sohi
September 2006 **Proceedings of the 15th international conference on Parallel
architectures and compilation techniques PACT '06**
Publisher: ACM Press

Full text available: 📄 pdf(261.29 KB)   Additional Information: full citation, abstract, references, index terms

Multiprocessor operating systems (OSs) pose several unique and conflicting challenges to
System Virtual Machines (System VMs). For example, most existing system VMs resort to
gang scheduling a guest OS's virtual processors (VCPUs) to avoid OS synchronization
overhead. However, gang scheduling is infeasible for some application domains, and is
inflexible in other domains.In an overcommitted environment, an individual guest OS has
more VCPUs than available physical processors (PCPUs), precluding t ...

Keywords: chip multiprocessors, synchronization overhead, virtual machines
